

# CS2048—Homework 1

## Reading

Read the following sections of the [language guide](#)

Section	Special attention to
<b>The Basics</b>	Constants and Variables, Type Safety and Type Inference, Optionals
<b>Basic Operators</b>	
<b>Strings and Characters</b>	Strings Are Value Types, String Interpolation, Counting Characters
<b>Collection Types</b>	Mutability of Collections, Arrays
<b>Control Flow</b>	Switch
<b>Functions</b>	Defining and Calling Functions, Function Parameters and Return Values, Function Types
<b>Closures</b>	Closure Expressions, Trailing Closures
<b>Enumerations</b>	Enumeration Syntax, Matching Enumeration Values with a Switch Statement, Associated Values
<b>Classes and Structures</b>	Comparing Classes and Structures
<b>Properties</b>	Stored Properties, Computed Properties

## Programming Assignment (due Aug 28th)

Continue the calculator app we started in class. Add the necessary buttons **and** the logic necessary to implement the following operations: +, -, ×, ÷, +/-, %, AC, . (decimal point).

- ▶ Use color on the UI, make the operation buttons look different than the number ones.
- ▶ You might want to add a `isPartialResult` property to your code to keep track pending binary operations (+, -, ×, ÷).
- ▶ Highlight current operation button (like the iPhone calculator).
- ▶ Don't worry about the difference between AC and C.

## Tests

In order for your assignment to receive the highest grade the calculator must compile and pass all the following tests:

- ▶ Prevent the user from adding multiple decimal points in a number (e.g., user shouldn't be able to enter "0.12321.121.11").
- ▶ When the calculator starts up it should display the number 0, pressing 0 multiple times should not change the display.
- ▶ The button +/- should not change the display for the number 0.
- ▶ Your calculator should be able to re-apply the same operation multiple times. So if the user hits the following sequence of keys "7", "+", "1", "=", "=", "=", the final result should be 10. The same applies to any of the binary operations.

Don't worry about what happens when you type multiple operations in sequence. For instance, when you type "1 + 2 × 3" on the iPhone calculator you get 7. We are not going to test for this.

## What to Hand In

Submit, via CMS, the entire project directory. If your project is called `MyProject`, Xcode will create a directory called `MyProject`, with a file called `MyProject.xcodeproj` and a subdirectory `MyProject`, please submit the **top level** `MyProject`.

## Honesty and Integrity Policy

Projects are to be done individually. You may collaborate on the whiteboard, but each student's code must be their own.
